

ABSTRACT

DATA TRANSMISSION AND RECEPTION SYSTEM, DATA TRANSMISSION AND
RECEPTION METHOD, INFORMATION PROCESSING DEVICE, PROGRAM, AND
RECORDING MEDIUM

Included are an information processing device 110 configured to perform information processing, and an IC tag 130 configured to receive data from the information processing device 110 and store the received data in a case that the IC tag is activated by receiving a power supplied from the information processing device, and transmit and receive data to and from a reader R and store the received data in a case that the IC tag 130 is activated by receiving an electric wave transmitted from the reader R. The information processing device 110 includes a data transmitting unit configured to transmit to the IC tag 130, data indicating information to be referred to in a situation where the information processing device 110 is not activated.
