

CONTROL METHOD AND INFORMATION PROCESSING SYSTEM

ABSTRACT

5 A control method includes: detecting, by a touch panel, an operation performed by a user (S22); and transmitting, to an information processing device, a request for image information of a control image (S23). The control method also includes: receiving the image information from the information processing device (S24); and displaying the control image on a display based on
10 the received image information (S25). The control image is an image which is displayed according to the detected operation and used by the user to control an air conditioner. In the control image, all image parts forming the control image are arranged in advance.
