

ASSET TRANSFER METHOD AND APPARATUS, AND ELECTRONIC DEVICE**ABSTRACT**

One or more implementations of the present specification provide an asset transfer method and apparatus, and an electronic device. The method can include: receiving, by a first
5 blockchain member, a request for transferring a first amount of blockchain assets between a payer and a payee. The first blockchain member determines a second blockchain member corresponding to the payee, and several intermediate blockchain members between the first blockchain member and the second blockchain member. The first blockchain member initiates an asset transfer contract operation based on an asset transfer condition published by
10 each intermediate blockchain member. After the asset transfer contract operation takes effect, blockchain asset transfer among the first blockchain member, the several intermediate blockchain members, and the second blockchain member is completed in a same atomic transaction, and asset transfer amounts satisfy a numerical relationship indicated by the asset transfer condition.
