

ABSTRACT**INDOOR AIR-CONDITIONING UNIT HAVING A DETACHABLE AIR GUIDE**

5 An indoor air-conditioning unit (100) having a pair of detachable air guiders (102, 104) is disclosed according to the embodiments of the present invention. A second air guider (104) is removably connected to a first air guider (102) and the space between an upper edge of the first air guider (102) and an upper edge of a front heat exchanger (114) is greater than the diameter of a cross flow fan (110). This enables removal of the cross flow fan (110) by removing the second air guider (104), without necessity of removing the front
10 heat exchanger (114).
