

Mapping Method, Encoder, Decoder, and Computer Storage Medium

Abstract

5 A mapping method, an encoder, a decoder and a computer storage medium. Said method may comprise: determining an intra prediction mode used when encoding or decoding a current image block (S1001); if the intra prediction mode is an MIP mode, mapping the MIP mode into a first non-MIP mode (S1002); and if the intra prediction mode is a non-MIP mode, mapping the non-MIP mode into a second MIP mode (S1003).
