CLAIMS

[Claim 1]

A compound resin comprising a hydrogenated block copolymer (X) that is a hydrogenated product of a block copolymer (X') having a polymer block (A) mainly composed of a structural unit derived from an aromatic vinyl compound and a polymer block (B) mainly composed of a structural unit derived from a conjugated diene compound, at least one terminal of which is formed of the polymer block (A), and an oil (Y) having a kinematic viscosity at 40°C of 20 mm^2/s or less,

the content of the oil (Y) relative to 100 parts by mass of the hydrogenated block copolymer (X) being from 450 to 1,500 parts by mass.

[Claim 2]

The compound resin according to claim 1, wherein the aromatic vinyl compound is styrene.

[Claim 3]

The compound resin according to claim 1 or 2, wherein the conjugated diene compound is at least one selected from the group consisting of butadiene and isoprene.

[Claim 4]

The compound resin according to claim 1 or 2, wherein the oil (Y) is a paraffin-based process oil.

[Claim 5]

The compound resin according to claim 1 or 2, further comprising a UV absorbent.

[Claim 6]

A human body model comprising the compound resin of claim 1 or 2.

[Claim 7]

The human body model according to claim 6, comprising at least one part selected from the group consisting of skins, fats, organs, muscles and blood vessels, which is formed of the compound resin.

[Claim 8]

The human body model according to claim 6, which is for use for medical phantoms or for use for medical simulators.
