

[Title of Invention]

Disposable diaper

[ABSTRACT]

A fastening tape (90) of a disposable diaper (10) is provided with a base sheet and a hook sheet. The base sheet has: a joint portion (93) which is joined with a side flap; and a tip end (96). A length (L11) of a product widthwise direction of the tip end (96) is 5 mm to 12 mm. A distance (L12) in a product longitudinal direction between an outside end in the product longitudinal direction of the joint portion and an outside end of the product longitudinal direction of the hook sheet is 2 mm to 12 mm. A length (L13) of the product longitudinal direction at a boundary between the hook sheet and the tip end (96) is two times or more of a distance (L14) in the product longitudinal direction between an inside end of the product longitudinal direction of the base sheet and an inside end of the product longitudinal direction of the hook sheet. A hook sheet (92) extends outside of the product longitudinal direction than a middle point (C1) between an outside end of the product longitudinal direction at an inside end of the product widthwise direction of the hook sheet and an outside end of the product longitudinal direction at an inside end of the product widthwise direction of the tip end (96).
