Abstract
GUIDE TUBE

10 A tip guide tube includes a wire in which a connection terminal is disposed, a tip portion to which the wire is fixed and which is bendable, a main body portion to which the tip portion is connected, and a lid portion that fixes the wire in a manner movable forward and backward and that is fitted to the main body portion. An additional guide tube includes additional wire in which an additional connection terminal is disposed and in which a slide terminal is disposed, an additional main body portion, an additional lid portion that fixes 15 the additional wire in a manner movable forward and backward and that is fitted to the additional main body portion, and a slide portion disposed in the additional lid portion and configured to restrict movement of the slide terminal in a manner movable forward and backward in a length direction of the additional lid portion. The tip guide tube and the additional guide tube are 20 integrated into one, and the additional connection terminal is pulled to bend the tip portion.
