(54) Title: CHATBOT FOR PREVENTING OF ONLINE FRAUD

FIG. 1

(57) Abstract: In some embodiments, a fraud prevention system uses a chatbot agent to provide input to a threat analyzer. The chatbot agent converses with a user to identify a security need, guide the user into providing relevant data (e.g., a content of an email, a screenshot of a social media conversation), identify a target object for analysis, and indicate the target object to the threat analyzer. In turn, the threat analyzer applies a battery of tests to determine whether the target object is indicative of online fraud, such as a phishing attempt. The threat analyzer returns a verdict of the analysis to the chatbot agent for communication to the user.
