

ABSTRACT

The invention concerns a device consisting of a hard plastic tray (10), sealed with a transparent plastic film (20), wherein have been previously introduced the fish or aquatic plants and water. On the sealing film (20) there is indicated the site for perforating two orifices (21, 22) for respective passing through a drip tap (37) and the discharge of an overflow during the slow acclimatisation phase, at the end of which the content of the tray (10) is poured into an aquarium (1) after the sealing film (20) has been removed.
