

Abstract

The present invention relates to compounds of Formula I and Formula II and the use thereof in the treatment of metabolic diseases such as liver fibrosis and non-alcoholic hepatitis. Specifically, provided are the compounds as shown, and pharmaceutically acceptable salts or esters, prodrug, stereoisomers, hydrates, solvates, crystalline forms and metabolite forms thereof, or any combination or mixture thereof in the preparation of a drug or reagent, the drug being used for at least one of the following: $A-(L_1)_x-A'$ (Formula I); $A_1-(L_1)_x-A_1'$ (Formula II).
