(54) Title: NETWORK APPLICATION INTERFACE FOR MOBILE USERS

(57) Abstract: In the present invention, we provide a run-time infrastructure that dynamically adapts enterprise content and services in order to maximise their value to the mobile user. The system takes account of changes in both the mobile user's business context, typically represented by their calendar and scheduled tasks, and their physical environment, typically represented by the available QoS. This is used to determine what content to source or services to offer to mobile users.
