(54) Title: MULTI-DEPLOYABLE SUBSEA STACK SYSTEM

(57) Abstract: Methods for deploying a subsea blowout preventer stack system comprising a lower marine riser package, a blowout preventer stack with a first ram blowout preventer, and an additional blowout preventer package releasably coupled to the blowout preventer stack and comprising a second ram blowout preventer. The subsea blowout preventer stack assembly can be deployed by coupling a drilling riser to the lower marine riser package that is releasably connected to the blowout preventer stack. The lower marine riser package and blowout preventer stack are then towed toward a subsea wellhead and then landed on the additional blowout preventer package that is coupled to the subsea wellhead.
