(54) Title: DETECTION OF HEPATITIS B VIRUS

(57) Abstract

An improved assay is disclosed for detecting viral nucleic acid sequences. The improvement involves concentrating viral particles from a biological sample by centrifugation. Once concentrated, the nucleic acid molecules in the viral particles can be manipulated or detected using any suitable procedure. Many such procedures are known and can be used with the concentrated viral nucleic acid molecules. Preferably, the concentrated viral nucleic acid is detected using a detection assay.
