(54) Title: RETRACTABLE SCREEN SYSTEMS

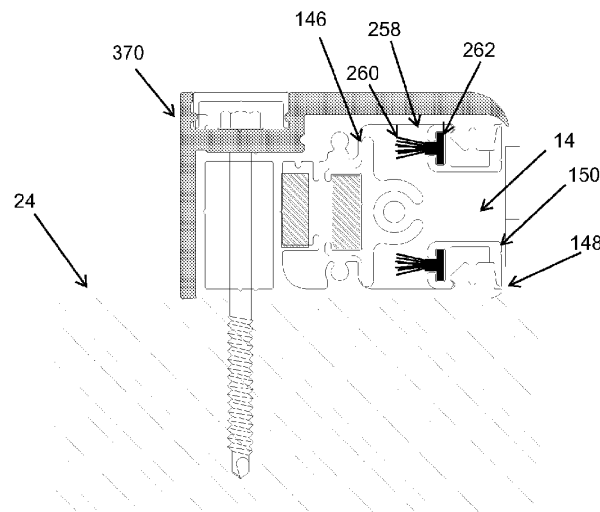

FIG. 26

(57) Abstract: In one or more arrangements, a retractable screen system is provided. The system includes a roller tube having an exterior surface. A screen is connected to the roller tube and an upper edge of the screen. The system includes magnetic track assemblies having screen receivers configured to connect with and hold sides of the screen while permitting the screen to be raised and lowered. The magnetic track assemblies include tracks configured to attached to a structure and receive and hold the screen receivers in a channel between first and second side walls of the track. Magnetic attraction between the screen receivers and the tracks pulls screen receivers into the tracks and places tension on the screen. In one or more arrangements, the system includes retainers configured to connect with the first and second side walls of the track and prevent the screen receiver from coming out of the track.
