

DEVICE VERIFICATION METHOD AND APPARATUS

ABSTRACT

The present invention provides device verification methods and apparatuses, wherein the device verification methods are used for verifying a target device requesting performing a target service, one method including: receiving a device verification request sent by the to-be-verified target device, the device verification request including: a device certificate and first device attribute information of the target device, and the device certificate including a device fingerprint generated according to second device attribute information; and when it is confirmed according to the device fingerprint that the device certificate is valid, and the device fingerprint matches the first device attribute information, determining that the device certificate is a certificate of the target device, and allowing the target device to perform the target service. The present invention makes device verification more reliable.
