(54) Title: **TELESCOPING SLIDE WITH QUICK-MOUNT SYSTEM**

(57) Abstract: A telescoping slide assembly (10) is provided for the mounting of an equipment mounting support and includes and elongated stationary slide member (20) having two ends and an elongated movable load-carrying slide member (24) having two ends. The load-carrying slide member (24) is telescopically connected to stationary slide member (20) so as to have one end of the load-carrying slide member extended away from one end of the stationary slide member in an extended position and the one end of the load-carrying slide member movable telescopically with respect to the stationary slide member to a retracted position wherein the one end of the load-carrying slide member is telescopically withdrawn into the stationary slide member so as to be located adjacent to the one end of the stationary slide member. The load-carrying slide member (24) is provided with at least two post-engaging slots (16) and the load-carrying slide member post-engaging slots (16) are provided with a support surface (19) adapted to receive and support mounting posts (14) on an equipment mounting support to provide a coupling for the equipment mounting support to the telescopic slide assembly (10).
