

ABSTRACT

Embodiments of the disclosure relate to a method, an apparatus, a device, and a storage medium of interface interaction. The method provided herein includes: displaying a first preview interface of a live streaming room, live streaming content of the live streaming room being provided in the first preview interface with a first content parameter; displaying a second preview interface of the live streaming room in response to a display time of the preview interface reaching a threshold, the live streaming content of the live streaming room being provided in the second preview interface with a second content parameter different from the first content parameter; and displaying, based on a first predetermined operation in the second preview interface, a live streaming interface entering the live streaming room. Based on the above manner, the embodiments of the disclosure may guide the user into the live streaming room by changing the content parameter of the live streaming content provided in the preview interface, thereby facilitating the content sharing of the live streaming room.
