(54) Title: SYSTEM FOR PROTECTING OBJECTS DISTRIBUTED OVER A NETWORK

162162

(57) Abstract: A system for protecting objects (16) stored on network servers (12) running computer software (14) that designates which objects (16) are to be protected and the security policy for that object (16). The object server (12) creates an enhanced request containing encrypted data upon request for a protected object (16) and redirect that to a security server (18) which authenticates the request, retrieves and encrypts the requested object using a one-time encryption key, and combines the encrypted object with mobile code, the security policy, and object controls to implement the policy. This requester (10) receives this package for instantiation of the security policy and object controls.
