

ABSTRACT

The invention relates to an articulated tracked vehicle (IV) comprising a first vehicle unit (1) and a second vehicle unit (2) controllably connected by means of a control member (3), wherein the first vehicle unit (1) comprises a combustion engine (10), wherein the combustion engine (10) is arranged to drive a generator (12) for electric generation, wherein the generator (12) is arranged to transfer power via power electronic means (20) to at least one electric motor (401; 403) of at least one electric propulsion unit (400a-b), wherein transmission of power between said vehicle units (1, 2) is arranged to be effected only electrically, wherein the vehicle has an electric motor (401, 403) per vehicle unit, wherein the vehicle has an electric motor per pair of first and second, and third and fourth drive shaft (6a-b, 6c-d) respectively, wherein the respective electric motor (401, 403) is arranged to drive a shaft (410) running in the longitudinal direction of the vehicle.
