

**METHOD FOR DETECTING A PASSENGER ENTERING A LIFT CAR OF A
LIFT SYSTEM**

Abstract

5

The invention relates to a method for detecting an entry into an elevator car by a passenger.

10

In the method according to the invention for detecting an entry into an elevator car (11) of an elevator system (10) by a passenger (23), it is assumed that the passenger (23) is carrying a mobile device (24). The terminal device (24) has at least one, but in particular a plurality of sensors (25), with which the mobile device (24) detects and evaluates measured values. An entry into the elevator car (11) is then detected on the basis of said measured values.
