

Monitoring Apparatus for a Laser Beam

Abstract

5 The present invention relates to a monitoring apparatus (1) for a laser beam (6), comprising a body (3, 7, 8) having a passage opening (5) and a sensor (4) that is disposed on the body (3, 7, 8), wherein impact of the laser beam (6) onto the body (3, 7, 8) can be detected using the sensor (4).
