(54) Title: ELECTRONIC DEVICE AND PROGRAM FOR CONTROLLING ELECTRONIC DEVICE

FIG.29

(57) Abstract: Disclosed is an electronic device that is connected to a display device and outputs image data to the display device, the electronic device including a resolution retrieval unit that retrieves a recommended resolution; a resolution determination unit that determines whether the recommended resolution is greater than or equal to a priority resolution; a resolution selecting unit that selects a first resolution; and a resolution changing unit that changes a resolution of the display device to be the first resolution. When the resolution determination unit determines that the retrieved recommended resolution is greater than or equal to the priority resolution, the resolution selecting unit selects the priority resolution as the first resolution. When the resolution determination unit determines that the retrieved recommended resolution is less than the priority resolution, the resolution selecting unit selects a standard resolution as the first resolution.
