

A PISTON FLUSH VALVE

ABSTRACT

10 A piston flush valve for use with a sanitary fixture, comprising: a housing shaped and dimensioned to form an inlet portion and an outlet portion; a piston assembly capable of actuated so as to move between a closed configuration and an open configuration; and a primary seal carried within the housing, wherein the primary seal is in a fixed relationship with its surroundings during the movement of the piston assembly between the closed configuration and the open configuration. The present disclosure
15 also relates to a modular valve assembly of a sanitary fixture for carrying out a flushing action
