

ABSTRACT

In an offshore floating structure, a production facility can be mounted on an upper deck 12 of a floating body. A
5 plurality of transverse strength members 40 extending in the breadth direction of the floating body 10 is provided on the lower surface of the upper deck 12. A plurality of longitudinal strength members 41 extending in the longitudinal direction of the floating body 10 is provided on
10 the lower surface of the upper deck 12. At least a part of a plurality of points on the upper surface of the upper deck 12 at the coordinates where the transverse strength members 40 intersect with the longitudinal strength member 41, define a stool placement area 43 where stools 30 for supporting the
15 production facility 20 can be mounted.
