Abstract

Method, Terminal Device and Network Device for Transmitting Signals

Disclosed by embodiments of the present application are a method, terminal device, and network device for transmitting signals, the method comprising: a terminal device determining sounding reference signal (SRS) resource indication information corresponding to a target uplink signal; the terminal device determining a first power control parameter of the target uplink signal according to the SRS resource indication information; the terminal device determining a transmitting power of the target uplink signal according to the first power control parameter; the terminal device sending the target uplink signal to a network device according to the transmitting power. The method, terminal device and network device of the embodiments of the present application are helpful in improving the accuracy of power control, which may improve the performance of system transmission.
