(54) Title: SYSTEM AND METHOD FOR DISPLAYING DATA ON A THIN CLIENT

(57) Abstract: A thin-client user interface includes a user interface and an application server. The user interface is executed on a client device, such as a personal computer having a display. The user includes a client application for displaying data. The application server is coupled with the user interface and with a remote database via an electronic data network and is configured to receive a request for data from the user interface, to generate a query request based on the request for data, to access the database and submit the query request to the database, to receive results from the database in response to the query request, and transmit a portion of the results to the user interface (Figure 2).
