(54) Title: DEVICE FOR FORMING CONNECTION ELEMENTS

(57) Abstract: The invention relates to a device for forming connections of a printed circuit board which is arranged within a signal receiver frame. The device comprises a plurality of connection elements (3a ... 3k) whose end portions are bent, each end portion being provided with at least one projection (5). Between each time two connection elements (3a ... 3k) there is provided a respective detainer (4a ... 4j) whose end portion is also bent. The end portions of the connection elements (3a ... 3k) define a plane which extends parallel to a plane defined by the end portions of the detainers (4a ... 4j).
