(54) Title: METHOD, SYSTEM AND MEDIA SERVER FOR CREATING MULTICAST CHANNEL

(54) 发明名称: 创建组播频道的方法、系统和媒体服务器

图 2 / Fig. 2

(57) Abstract: A method, a system and a media server for creating a multicast channel. The method for creating a multicast channel comprises: a media server receiving a command for creating a multicast channel from a client, the command carrying a channel number and a multicast address of the multicast channel to be created and an interface address of the media server; the media server binding, according to the command, the multicast channel identified by the channel number and the interface identified by the interface address of the media server, and obtaining port information of the interface; the media server creating, according to the port information and the multicast address, the multicast channel from a port identified by the port information to a multicast group identified by the multicast address. In the method, system and media server for creating a multicast channel, by binding the multicast channel and the interface, one multicast channel only occupies one multicast routing entry of the switch, thereby supporting more multicast channels.
