

ABSTRACT

5 The embodiments provide a periodic uplink information/signal transmission method, apparatus and system. The method includes that: a terminal receives configuration signaling transmitted by an access network device, the configuration signaling containing a configuration parameter of periodic uplink information/signal; and the terminal determines a target transmission unit according to the configuration
10 parameter, and transmits or cancels target periodic uplink information/signal according to the number of an uplink symbol in the target transmission unit. According to the embodiments, when the transmission unit configured to transmit the target periodic uplink information/signal dynamically changes, the terminal may determine whether to transmit or cancel the target periodic uplink information/signal
15 according to the number of the uplink symbol in the present transmission unit, and responsive to determining that the target periodic uplink information/signal is required to be sent, selects a transmission manner for the target periodic uplink information/signal and transmits the target periodic uplink information/signal according to the transmission manner. Therefore, a probability that the terminal
20 effectively feeds back the periodic uplink information/signal is improved.
