(54) Title: LIQUID DELIVERY COMPOSITIONS

(57) Abstract

Improved biocompatible liquid delivery compositions, which are useful for the formation of sustained release delivery systems for active agents, are provided. The compositions include liquid formulations of a biocompatible polymer or prepolymer in combination with a controlled release component. The controlled release component includes an active agent. These compositions may be introduced into the body of a subject in liquid form which then solidify or cure *in situ* to form a controlled release implant or a film dressing. The liquid delivery compositions may also be employed *ex situ* to produce a controlled release implant. Methods of forming a controlled release implant and employing the liquid formulations in the treatment of a subject are also provided.
