(54) Title: HAIR CUTTING METHOD AND DEVICE

(57) Abstract

The invention concerns both a method and device for cutting hair. The device includes a multi-faceted cutting means (10) and a handle (20). The cutting means (10) is advantageously formed from a broken piece of glass so as to give a ragged broken edge to form a multi-faceted cutter with a plurality of cutting edges (13) distributed across it. Having cutting edges (13) distributed in this way, has been found advantageously to provide hair styling effects which give good texture to a hair cut and provide natural build.
