

TITLE: FACE AUTHENTICATION METHOD

ABSTRACT

A face authentication device 100 of the present invention includes an extraction means
5 121 for extracting a plurality of face images in a captured image, a determination means 122 for
determining, on the basis of at least one of the face images, determining whether or not the
person of the face image satisfies an exclusion condition of a face authentication process, and an
authentication means 123 for excluding the face image of the person satisfying the exclusion
condition, and performing the face authentication process on another face image to authenticate
10 whether or not the person of the other face image is a registered person.
