CLAIMS

[Claim 1] A mattress with pocket coils, the mattress comprising:

coil springs forming the pocket coils;

a first fabric defining pocket spaces in which the respective coil springs are housed; and

a second fabric extending in a planar shape so as to cover an entirety of the pocket spaces;

wherein the first fabric is provided for each of rows of the pocket spaces;

wherein the first fabric has perforations on both sides with respect to a center of each of the pocket spaces, the perforations being continuous in a first direction;

wherein the second fabric is fixed to a portion between the two perforations of the first fabric, the portion being between the two perforations in a second direction intersecting the first direction, wherein the second fabric has a cutting line along the first direction, wherein the cutting line extends from one end portion to an opposite end portion of the second fabric in the first direction,

wherein the cutting line includes a plurality of cutting lines spaced apart from one another in the second direction intersecting the first direction, wherein the second fabric has cutting lines for

separating along the rows of the pocket spaces, and each of the cutting lines is provided between two rows adjacent to each other in the second direction among a plurality of rows in a top view, and wherein the two perforations are configured to be broken in response to the portion of the first fabric being pulled in a direction away from the pocket spaces.

[Claim 2] The mattress according to claim 1, wherein the two perforations are provided at positions offset toward the second fabric relative to a center in an axial direction of each of the coil springs, the axial direction corresponding to a vertical direction.
