

WASHING MACHINE

ABSTRACT

5 A washing machine includes: a housing; a water tub supported inside
the housing; a washing tub rotatably provided inside the water tub; tank (117)
including upper face opening (118) for feeding a liquid agent provided at an
upper part of the tank, and discharge port (123) configured to discharge the
liquid agent provided at a lower part of the tank; and an automatic liquid-agent
10 feeding device configured to supply the liquid agent stored in tank (117) into
the washing tub. Tank (117) includes mesh member (122) having a net shape
between upper face opening (118) and discharge port (123). With this
configuration, the washing machine that facilitates detaching of mesh member
(122) from tank (117) can be provided.
