ABSTRACT

METHOD OF ONLINE SHOPPING USING SMART CONTAINER SHOP

A method of online shopping using a smart container shop. The method uses a shopping system including smart container shops distributed throughout a whole country or across countries and a shopping server generating a shopping application and transfers the shopping application to a user terminal, such that the user terminal provides information regarding an ordered product in a QR code. A user is allowed to make an online order and collect a product from a smart container shop in a destination. The convenience of shopping is improved.
