(54) **Title:** METHOD AND SYSTEM FOR DESIGNING GOODS

FIG. 1

(57) **Abstract:** A system for computer-aided design of an object, including a first computer system operated by a first user, a second computer system operated by a second user, an application server hosting a design software application, and a web server providing an interface for at least the first user to access the design software application. The design software application may be configured to receive a first input comprising a first modification to a design template or creating a new design from the first computer system, receive a second input comprising a second modification to the design template from second computer system, and modify the design template based on the first and second modifications to generate a modified design.
