

METHOD AND DEVICE FOR THE RIGID CONNECTION OF TWO THIN**ELEMENTS****ABSTRACT**

5

According to the present invention, the device comprises: • a flange (1) having an at least approximately trapezoidal tapered section; • a counter-flange (3) having a shape complementary to that of said flange (1); and • clamping means (5) for clamping said flange (1) and said counter-flange (3) one in the direction of the other, interposing the edges of said
10 elements (6, 7) shaped at least partially in the shape (6A, 7A) of said counter-flange (3).
