ABSTRACT OF THE DISCLOSURE

FEEDER BELT FOR STRIP-SHAPED PARTS

G00002

A feeder belt for strip-shaped parts used to feed the strip-shaped parts in various processes such as plating, deflashing, or the like among processes for manufacturing semiconductors or other articles at industrial scale. According to the feeder belt, by improving the structure of a finger including a belt body, the separation, fatigue, and the sliding during feeding of the strip-shaped parts of the finger are solved. Since external force can be applied in the horizontal direction when loading and unloading the strip-shaped parts, peripheral devices are simplified.
