

Abstract

Conveyance equipment 10 includes a first conveyor 20 that conveys a tray 90 on which an article 95 can be placed along a first conveyance path 11, and a second conveyor 30 that conveys the article 95 along a second conveyance path 12 provided above the first conveyance path 11. The second conveyor 30 loads the article 95 onto the tray 90 conveyed by the first conveyor 20. In at least a part of the first conveyor 20, an upward inclined portion 40A is formed to incline upward in a conveyance direction of the article 95.
