

MESSAGE DEVICE

ABSTRACT

In the case of a prior art massage device, an adhesive pad is used to hold a vibrating motor on a human body. Therefore, there is a problem in that it is difficult, while transmitting vibrations, to knead or pinch a region being massaged. Disclosed is a massage device which massages a human body by transmitting vibrations to the same. This massage device is provided with vibrating motors which generate vibrations, and a pair of gloves which are worn on hands that apply massage and each of which is equipped with at least one of the vibrating motors.
