

ABSTRACT

The present disclosure provides a live streaming processing method, an apparatus, a device, and a storage medium. The method includes: firstly, displaying a first recommended object page on a first live streaming page, where a target recommended object belongs to a recommended object in a non-explanation state; then, in response to an explanation request triggered for the target recommended object, displaying first explanation request prompt information for the target recommended object on the first recommended object page, where the first explanation request prompt information is used to prompt summary information on explanation requests triggered for the target recommended object.
