(54) Title: REMOTE BROWSING SESSION MANAGEMENT

**Fig. 1.**

(57) **Abstract:** A remote browsing process is directed to the generation and management of a remote browse session at a network computing and storage provider. A client computing device requests a remote browse session instance at a network computing and storage provider. The browse session instance may correspond to one or more requested network resources. The network computing and storage provider instantiates the browse session instance and retrieves the requested content. The network computing and storage provider processes the requested content for display, and provides display data corresponding to a processed representation of the requested content to the client computing device in accordance with a display protocol configuration. The client computing device may display the representation of the requested content in a browser, and may send user interaction data based on user interactions with the representation to the network computing and storage provider for processing.
