

Abstract

The disclosure provides a method for moving a Chinese input candidate word box and a mobile terminal, wherein the method includes: creating a candidate word box and drawing the candidate word box in a position within the range of a screen; 5 analyzing and calculating a moving distance after generating an input signal, through directly dragging the candidate word box by a user or through operating a direction key or a direction soft key by the user to move the candidate word box; and destroying the candidate word box in situ when the moving distance is not beyond the range of the screen, and redrawing a candidate word box in a new position which the candidate 10 word box is moved to. The method and the mobile terminal of the disclosure enable the user to freely move the position of the candidate word box within the range of the screen according to the user's requirement when the user inputs Chinese, so that the user can acquire the view in the range of the whole screen, thereby improving utilization rate of the range of the screen.
