ABSTRACT

G00002

An internet communication system, which is provided with sessionmanaging servers 210 and 220. In the system, each session
5 managing server manages communication adapters 110 and 120 and
call relay servers 310 and 320. For that reason, the processing
load of each session managing server is allowed to be equalized.
As a result, the operational efficiency of the system may be
enhanced, and quality of services offered to the user of the
10 system may be improved.
