(54) Title: FOLDABLE LOCKING MECHANISM

FIG. 3

(57) Abstract: A foldable locking mechanism (300, 500) adapted for a frame body (400) includes a first mounting seat (1), a second mounting seat (2), a third mounting seat (4), a first locking component (3) and a driving component (1a, 2a). The second mounting seat (2) is pivotally connected to the first mounting seat (1) and the third mounting seat (4). The first locking component (3) is at least partially disposed between the second mounting seat (2) and the third mounting seat (4) and movable between a first releasing position and a first locking position for allowing or restraining a relative pivotal movement of the second mounting seat (2) and the third mounting seat (4). The driving component (1a, 2a) is disposed on the first mounting seat (1) and abuts against the first locking component (3). The driving component (1a, 2a) is configured to drive the first locking component (3) to move to the first releasing position to allow a folding operation of the foldable locking mechanism (300, 500) for allowing a folding operation of the frame body (400).
