

ABSTRACT

The embodiments of this application disclose a video generation method and apparatus, and a computer-readable storage medium. The method includes: obtaining initial status data of a virtual object and audio data; extracting an audio feature from the audio data, and encoding the audio data to obtain an encoded feature; fusing the audio feature and the encoded feature to obtain a fused audio feature of the virtual object; obtaining updated status data of the virtual object according to the fused audio feature and the initial status data; and generating video data according to the updated status data and the audio data. Therefore, accuracy of matching a target part in video data with audio data is improved, accuracy of video generation for the virtual object is improved, and efficiency of video generation for the virtual object is further improved.
