(54) Title: LEVELING DEVICE FOR A SUPPORT LEG

(57) Abstract

An apparatus for leveling a support leg (4) on a floor. The apparatus includes an ankle member (20) extending from a bottom of the leg (4), a foot member (60), a heel member (110), and an adjustment device (100). The foot member (60) includes a rear portion and a front portion which has a surface for engaging the floor. The ankle member (20) is pivotally attached to the rear portion. The heel member (110) extends downwardly from one of the rear portion of the foot member (60) and the ankle member (20). The adjustment device (100) interconnects the ankle member (20) and foot member (60) and is adapted to allow the foot member (60) to be rotated through and fixed at various angles relative to said foot member (60).
