(54) Title: ONTOLOGY BROWSER AND GROUPING METHOD AND APPARATUS

Fig. 14B

(57) Abstract: Apparatus for use in browsing one or more ontologies, the apparatus including at least one electronic processing device that determines an ontology, displays an indication of a plurality of ontology terms in the ontology, determines at least one identified ontology term from the plurality of ontology terms in response to user input commands, uses a reasoner to determine any axiom and any inference relating to the at least one identified ontology term and displays an indication of details relating to the at least one identified ontology term, the details including at least one of any axiom and any inference, at least one data property, at least one related ontology term and at least one object property.
