

Abstract

Method for Transmitting Signal, Network Device and Terminal Device

5 Disclosed are a method for transmitting a signal, a network device and a terminal device.
The method comprises: a first network device determining, in a first frequency band
corresponding to the first network device, a time-frequency resource for transmitting a signal;
and the first network device carrying out the transmission of the signal with a first terminal
device on the time-frequency resource. The method, network device and terminal device
10 according to the embodiments of the present application aid in improving the sensitivity of a
receiver, thus improving the reliability of transmission.
